United States Patent Office.

WILLIAM H. LEWIS, OF NEW YORK, N. Y.

Letters Patent No. 73,104, *dated January* 7, 1868; *antedated December* 24, 1867.

IMPROVED BREAD-BOARD.

The Schedule referred to in these Letters Patent and making part of the same.

TO ALL WHOM IT MAY CONCERN:

Be it known that I, WILLIAM H. LEWIS, of the city and State of New York, have invented, made, and applied to use, a certain new and useful Improvement in Boards upon which to Cut Bread, &c.; and I do hereby declare the following to be a full, clear, and exact description of the said invention, reference being had to the annexed drawing, making part of this specification, wherein—

Figure 1 is a plan of said board, with one side thereof in section, to show the knife in its case, and

Figure 2 is an elevation of the knife and edge of the board.

Similar letters designate the same parts.

Bread is usually cut upon a board especially provided for that purpose, and a knife is required that is sufficiently thin and sharp, or the bread will not be smoothly cut. It is important that the bread-knife be used exclusively for cutting bread, in order that it may remain sufficiently sharp, or be easily sharpened.

The nature of my said invention consists in a cutting-board and knife-case combined, so that the knife may be placed in its case as soon as used, and hung up or stood away with the board, and, therefore, is always in place for use, and out of the way of being injured, or being employed for general purposes. My combined knife-case and cutting-board is a new article of manufacture.

In the drawing, *a* is the cutting-board, of suitable size and shape, provided with a loop at one end, by which it may be hung up. *b* is the cutting-knife, shown as within the case *c*, that is formed by a mortise in the edge of the board, of a size and shape for receiving the knife. *d* is a cross-wire or plate, beneath which the blade of the knife is inserted, and *e* is a spring-bolt, taking a notch in the handle of the knife, to hold the same within the bread-board, when not required for use. *f* is a spring that throws out the handle of the knife when the spring-bolt or catch *e* is withdrawn. My cutting-board, formed with a recess or case for receiving a knife, is a new and useful article of manufacture.

What I claim, and desire to secure by Letters Patent, is—

The cutting-board for bread, &c., formed with a recess or case for receiving the knife, as set forth.

In witness whereof, I have hereunto set my signature, this seventeenth day of May, A. D. 1867.

W. H. LEWIS.

Brödbräde med anordning för knivens fasthållande.

Klass 34: b.

Patent i Sverige från den 6 maj 1919.

Då brödbrädet med förskärarkniven skall bäras till och från köket förekommer ofta att kniven faller av brädet ned på golvet och blir nedsmutsad. För att förekomma detta och att kniven alltid må vara på sin plats, så att man ej behöver leta efter densamma har gjorts föreliggande uppfinning, som avser ett brödbräde av det slag, som är försett med skaft och kännetecknas därav, att skaftet är tunnare än brädet och att från skaftets översida ingår i brädet en långsträckt urtagning eller spår, vari förskärarkniven kan instickas, då den ej skall användas.

Uppfinningen åskådliggöres i en utföringsform på bifogade ritning, där fig. 1 visar uppfinningen sedd från sidan och fig. 2 visar densamma sedd uppifrån. Fig. 3 är en skärning efter linjen a—b i fig. 2.

Handtaget 1 är tunnare än själva brödbrädet 2. Från handtagets översida utgår en urtagning eller ett spår 3 i brädet 2, mellan dettas skäryta och bottenyta. Detta spårs nedre sida 4 ligger i samma plan som handtagets övre sida. Då förskärarkniven 5 ej skall användas instickes den i spåret 3 och får da det läge, som visas pa ritningen. Knivens handtag 6 kommer då att ligga an mot brädets handtag 1 såsom synes i fig. 1.

Patentanspråk:

Brödbräde av det slag, som är försett med skaft, kännetecknat därav att skaftet är tunnare än brädet och att från skaftets översida ingår i brädet en långsträckt urtagning eller ett spår, vari förskärarkniven kan instickas, då den ej skall användas.

(Härtill en ritning.)

PATENT SPECIFICATION

Application Date: Aug. 27, 1923. No. 21,672/23. **215,249**

Complete Accepted: May 8, 1924.

COMPLETE SPECIFICATION.

A Cutting Board and Block.

I, JOHN ARTHUR BONHAM, 108, Broadway, Cricklewood, London, N.W. 2, British subject, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

My invention consists of an oblong board which is shaped into a handle one end in this end is a hole which is for the purpose of hanging it away when not in use. Then on the other end is secured a wooden block which is of the same width as the board. This block being secured by two screws from beneath the board.

In the centre of the face of this block is a slot which is lined and protected by a piece of metal which is secured to the face of the block.

The above mentioned slot is for the insertion of the end of a domestic knife.

By inserting the end of a domestic knife in the said slot and raising the knife and placing the required article to be cut on the board beneath the knife it requires a very slight pressure on the handle of the knife to cut the article beneath the knife.

It also does away with the risk of cutting the hand when the hand is employed on the back of a knife when forcing a knife through such article without the aid of my said invention.

In order that my said invention may be understood I append hereunto one sheet of drawings.

Fig. 1. Plan as made for general use.

Fig. 2. Side elevation showing the angle of the slot in the block.

Fig. 3. Front and face elevation showing the slot and protecting metal with securing screws as herein before described.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed, I declare that what I claim is:—

1. An apparatus for cutting domestic goods consisting of an oblong board shaped into a handle one end on the other end is secured a block in the centre of which is a slot lined by a piece of metal this slot being for the insertion of the end of a domestic knife.

2. An apparatus for the purpose of making the cutting of domestic goods much safer and easy by having the construction as shown in Figures 1, 2, 3, of the accompanying drawings.

Dated the 27th day of August, 1923.

J. A. BONHAM.

BREVET D'INVENTION.

Gr. 9. — Cl. 1. **N° 803.324**

Planche à hacher.

Société : ÉTABLISSEMENTS CHAUVET (Société anonyme) résidant en France (Drôme).

Demandé le 13 mars 1936, à 15 heures, à Valence.
Délivré le 29 juin 1936. — Publié le 28 septembre 1936.
(Demande de brevet déposée au Grand-Duché du Luxembourg le 14 mars 1935. — Déclaration du déposant.)

Jusqu'à présent, les planches à hacher ont été constituées par un plateau de bois en une seule pièce. Elles présentent, de ce fait, l'inconvénient de se voiler et de se fendiller, ce qui constitue une gêne pour les usagers.

La présente invention a pour but d'obvier à cet inconvénient. Elle consiste en une planche à hacher constituée de plusieurs éléments en bois, assemblés par collage ou autrement et reliés par des entretoises intérieures en fer ou autres, assurant à la planche une grande rigidité et l'empêchant de se gauchir et de se fendre.

Le dessin annexé représente, à titre simplement indicatif, et non limitatif, un mode d'exécution d'une planche à hacher conforme à la présente invention.

La figure 1 en est une vue en élévation, dont

La figure 2 est une coupe par A-B.

Les éléments constitutifs de la planche sont indiqués en 1; le nombre, la disposition et le mode d'assemblage de ces éléments pouvant être quelconques.

Dans le mode de réalisation représenté ici, l'élément médian se termine par une poignée 2, mais il va de soi que cette poignée pourra être remplacée par tout autre organe de préhension ou d'accrochage approprié, fixé en tout point convenable sur l'un quelconque desdits éléments.

En 3 sont indiquées les entretoises dont le but a été défini au début du présent mémoire; le nombre et l'orientation de ces entretoises pouvant varier suivant les dimensions de la planche et la résistance qu'on désire lui donner.

Dans certains cas, ces entretoises pourront se prolonger au delà des éléments extrêmes et comporter à leurs extrémités, un filetage recevant un écrou de serrage.

Toutes autres variantes rentrent, bien entendu, dans les limites de la présente invention.

RÉSUMÉ.

L'invention concerne une planche à hacher constituée de plusieurs éléments en bois, assemblés par collage ou autrement, et reliés par des entretoises intérieures en fer ou autres, assurant à la planche une grande rigidité et l'empêchant de se gauchir et de se fendre.

PROVISIONAL SPECIFICATION

Improvements in or relating to Pastry Boards

I, LEONARD VIVIAN ALFRED SMITH, a British Subject, of 72, Christchurch Road, Tulse Hill, London, S.W.2, do hereby declare the nature of this invention to be as follows:—

This invention relates to pastry boards the general object being to evolve a construction of board suitable for domestic use which will not have the disadvantages associated with boards of wooden construction as at present generally manufactured. Such wooden boards have the disadvantages of being liable to warp after a short period of use and there is a tendency for the pastry to stick to the wooden board during the rolling out process.

A pastry board in accordance with the present invention is of metal construction and is of shallow inverted dish-like formation, the board on its under surface being fitted with rubber or other suitable non-slip buffers or equivalent supporting members which serve to maintain the edges of the board out of contact with the surface on which it is placed.

In a preferred embodiment of the invention the board is in the form of a sheet metal pressing and is of shallow inverted dish-like formation, the board at its opposite ends being fitted with transversely arranged wooden battens which serve to carry the rubber or other buffer members, the battens being secured in position by means of screws inserted through the flanges at opposite ends of the board. This method of securing the battens and their associated buffers in position on the board has the advantage that a permanently flat and uninterrupted surface of the board is maintained, thus providing a board of a more hygienic construction than is the case with the usual cross-battened wooden board in which pastry crumbs and dirt are liable to accumulate in the cracks or crevices between the individual wood components.

The board may have a vitreous or other enamel finish which will, in addition to providing a smooth surface for the reception of the pastry can be made to harmonise with the particular colour scheme of the kitchen in which it is to be used. It is found that by employing metal in the formation of the board the pastry remains very cool during the rolling out process and furthermore there is little tendency for the pastry to stick to the surface of the board during the rolling out operation.

Dated this 10th day of May, 1946.

For the Applicant,
F. J. CLEVELAND & COMPANY,
Chartered Patent Agents,

Chancery Lane, London, W.C.2.

COMPLETE SPECIFICATION

Improvements in or relating to Pastry Boards

I, LEONARD VIVIAN ALFRED SMITH, a British Subject, of 72, Christchurch Road, Tulse Hill, London, S.W.2, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

[*Price 2/-*]

This invention relates to pastry boards the general object being to evolve a construction of board suitable for domestic use which will not have the disadvantages associated with boards of wooden construction as at present generally manufactured. Such wooden boards have the disadvantage of being liable to warp after

a short period of use and there is a tendency for the pastry to stick to the wooden board during the rolling out process.

A pastry board in accordance with the present invention is in the form of a sheet metal pressing of shallow inverted dish-like formation and fitted with internally arranged battens at opposite ends, said battens carrying rubber or other comparatively soft buffers for maintaining the metal board out of contact with the table or other supporting surface on which the board is placed.

It has already been proposed to construct a pastry board in the form of a sheet metal pressing of shallow inverted dish-like formation enclosing a wooden base fitting closely therein, the board being sometimes fitted on its underside with transversely arranged beading or rest members for spacing the pastry board above the surface of the table, the metal pressing having an enamelled surface.

In order that the invention may be clearly understood and readily carried into effect the invention is hereinafter described with reference to the accompanying drawings, in which:—

Figure 1 is a perspective view of a pastry board in accordance with the invention;

Figure 2 is an inverted plan view of the same;

Figure 3 is a section drawn to an enlarged scale on the line III—III in Figure 2.

In the preferred embodiment of the invention illustrated the board is in the form of a sheet metal pressing 1 and is of shallow inverted dish-like formation the board at its opposite ends being fitted with transversely arranged wooden battens 2 which serve to carry the rubber or other buffer members 3 the battens 2 being secured in position by means of screws 4 inserted through the flanges at opposite ends of the board. This method of securing the battens and their associated buffers in position on the board has the advantage that a permanently flat and uninterrupted surface of the board is maintained, thus providing a board of a more hygienic construction than is the case with the usual cross-battened wooden board in which pastry crumbs and dirt are liable to accumulate in the cracks or crevices between the individual wood components.

The board may have a vitreous or other enamel finish which, in addition to providing a smooth surface for the reception of the pastry can be made to harmonise with the particular colour scheme of the kitchen in which it is to be used. It is found that by employing metal in the formation of the board the pastry remains very cool during the rolling out process and furthermore there is little tendency for the pastry to stick to the surface of the board during the rolling out operation.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed, I declare that what I claim is:—

1. A pastry board in the form of a sheet metal pressing of shallow inverted dish-like formation and fitted with internally arranged battens at opposite ends, said battens carrying rubber or other comparatively soft buffers for maintaining the metal board out of contact with the table or other supporting surface on which the board is placed.

2. A pastry board as claimed in claim 1, wherein the battens are arranged transversely and are of a length equal to the internal width of the board.

3. A pastry board substantially as hereinbefore described with reference to the accompanying drawings.

Dated this 9th day of May, 1947.

COMPLETE SPECIFICATION

Improvements in and relating to Base Plates for Typewriters

We, AUG. BIRCHMEIER'S SÖHNE, of Murgenthal, Switzerland, a Body Corporate, organised under Swiss law, do hereby declare the invention, for which we pray that a patent may be granted to us, and the method by which it is to be performed, to be particularly described in and by the following statement:—

This invention relates to base plates for typewriters, and more especially to portable typewriters.

The invention consists in a base for typewriters, comprising a base plate and fastening means for securing the machine thereto, the base plate having an aperture for gripping and carrying the base with the typewriter thereon, downwardly directed outer edges adapted to support, on the underside of the plate, a layer of sound insulating material for the purpose of damping noise.

The invention will be clearly understood from the following description of forms which it may assume, and this description will be more readily followed by reference to the accompanying drawings, illustrating, by way of example only, six embodiments thereof. In the drawings:—

Fig. 1 shows a section through a typewriter base according to the invention along the line I—I of Figure 2;

Figure 2 is a plan view of the base shown in Figure 1;

Figures 3—8 show details of various means for securing the typewriter on the base plate, according to the invention.

Referring to the accompanying drawings, the base of a typewriter according to the invention has a base plate 1 of sheet metal, preferably aluminium or other light metal, or of synthetic resin, in which there is provided an opening 2 near one side of the plate adapted to serve as a handgrip for the base plate. The edges 3 of the aperture 2 and also the outer edges 4 of the plate are directed downwards for stiffening purposes and for the purpose of holding an insert 5 of sound-absorbing insulating material, such as felt in sheet form, on the lower side. On the upper side of the base plate means are provided for the detachable securing and mounting of a portable typewriter.

In accordance with the embodiment shown in Figure 3, bolts 6 with heads are provided on the upper side of the plate and held secure in the base plate 1 by screws 7 with heads on the lower side. In the frame 8 (Figure 3) of the typewriter rubber inserts 9 are provided by means of which the machine is secured on the bolts 6. The screws 7 can also be used for holding fast a rubber foot 10 (Figure 1) on the under-side of the base plate 1. Pins 6*a* are provided in the base plate to determine the position of the machine. For the purpose of holding the machine fast by its edges, there are provided on three sides of the sheet-metal plate, in accordance with another embodiment of the invention shown in Figure 4, tongues 12 which are stamped out and bent upwards to grip the frame of the machine. These tongues can be separate from the plate and secured thereon by any desired means, when the plate is of synthetic material.

A further embodiment of the invention is illustrated in Figure 5. The bolt 13 is provided with a head shaped as a segment of a sphere to form an abutment on the base, and held fast to the base by a screw 14 from the lower side of the base. On the machine frame 8 hollow inserts 14 are secured which hold fast a rubber ring 15 on the lower side of the machine frame, which rubber ring projects slightly over the flanged edge of the inserts, so that the edge of the rubber ring 15 bears against the upper side of the base plate. In the inserts 14 are secured U-shaped curved strip springs 16, the end of the limbs of which embrace the head of the bolt 13 on opposite sides and thus secure the machine detachably on the heads. In another

[*Price* 2/8]

embodiment of the invention illustrated in Figure 6, rubber feet 17 are inserted in the machine frame 8 in order to support the machine against the upper side of the base plate. In order to hold the machine fast on the base plate 1, use is made of a spring 18, fastened on the base plate at the side of the frame, having a notch 19.

Another embodiment of the invention illustrated in Figure 7 provides a catch 21 pivotable about a vertical axis 20 on the base 1, and held fast by a screw 22 on the base. One end of this catch engages the machine frame 8, while the opposite end 23 is bent up to facilitate manipulation of the catch.

Figure 8 shows a further embodiment of the invention adapted to facilitate connection of the machine frame 8 on the base plate 1. In this arrangement rubber rings 24 are mounted on the upper side of the base plate, while a screw 25 passes through the plate and the ring 24 from the lower side and engages in a threaded bore in the machine frame. The screw serves at the same time to hold fast the rubber foot 26.

On the plate 1, whatever clamping devices such as shown in the different figures of the accompanying drawings are employed, there may be provided bracket shaped strips 27 (Figure 1) for the purpose of holding fast the typewriter frame on the base plate.

If the base plate is made of synthetic resin, the retaining members for the typewriter provided on the plate may be, at least in part, moulded or forced into the base plate. On the upper surface of the base plate may be provided stiffening ribs pressed in the base plate.

What we claim is:—

1. A base for typewriters, comprising a base plate and fastening means for securing the machine thereto, the base plate having an aperture for gripping and carrying the base with the typewriter thereon, and downwardly directed outer edges adapted to support on the underside of the plate a layer of sound-insulating material for the purpose of damping noise.

2. A base as claimed in Claim 1 in which the hand-grip aperture is disposed near one side of the base plate.

3. A base as claimed in Claim 1 or 2, comprising on the upper side of the base plate upwardly projecting bolts with heads, which engage in rubber feet fastened on the frame of the machine, for holding the latter fast on the base plate.

4. A base as claimed in Claim 3 wherein the bolts are held fast by screws in the base of the plate, which screws on the under side of the plate support rubber feet on the base plate, projecting downwards beyond the sound-insulating layer.

5. A base as claimed in Claim 1 or 2 comprising on the upper side of the plate tongues projecting over the machine base and stamped out of the base plate, adapted to grip the frame of the machine.

6. A base as claimed in Claim 1, 2 or 3 comprising abutments on the base plate adapted to be engaged by U-shaped strip springs which hold the machine fast on the base plate.

7. A base as claimed in Claim 1, 2 or 3 comprising notched strip clamp springs adapted to hold the typewriter on the upper side of the base plate.

8. A base as claimed in Claim 1, 2 or 3 comprising pivoted catch means mounted on the base plate for holding the typewriter on the base plate.

9. A base as claimed in Claim 1, 2 or 3 wherein the typewriter is fastened to the base by means of screws and an intermediate layer of rubber on the upper side, and by means of a screw head and rubber foot on the base plate.

10. A base as claimed in any preceding claim wherein on the upper side of the base plate bracket shaped strips are provided for holding the frame of the typewriter to the base plate.

11. A base as claimed in any preceding claim wherein stiffening ribs are pressed into the base.

12. A base as claimed in any preceding claim wherein the base plate is formed of light sheet material.

13. A base as claimed in any of Claims 1—11, wherein the base plate is pressed from a synthetic resin.

14. A base plate as claimed in Claim 13, comprising retaining parts for the typewriter moulded or pressed in the base plate.

15. A base for a typewriter, more especially a portable typewriter, substantially as described herein with reference to the accompanying drawings.

HAUPTPATENT

Ritterwerk F. Ritter & Sohn, München-Pasing (Deutschland)

Brot- und Aufschnittschneidemaschine

Hans Koch, München (Deutschland), ist als Erfinder genannt worden

SWITZERLAND DIV.

Die Erfindung bezieht sich auf eine Brot- und Aufschnittschneidemaschine mit einem auf ihrer Grundplatte parallel zum Scheibenmesser geführten Schlitten für das Auflegen von verschiedenem Schneidgut, wie Wurst, Schinken, Brotkanten und dergleichen. Es ist bekannt, durch einen solchen leicht ansetzbaren und abnehmbaren Schlitten eine Brotschneidemaschine in ihrem Funktionsbereich derart zu erweitern, daß sie die Aufgabe einer Aufschnittmaschine zu erfüllen vermag. Mit Hilfe des Schlittens ist es in bequemer Weise möglich, Schneidgut verschiedener Art an das Messer heranzuführen. Der Schlitten kann wie bekannt mittels eines in den Spalt zwischen den beiden klappbaren Teilen der Grundplatte eingreifenden schmalen Steges an der Unterseite des Schlittens parallel zur Messerscheibe geführt werden.

Es ist bekannt, einerseits an der Grundplatte, anderseits an den entsprechenden Stellen der Unterseite des Schlittens in der Bewegungsrichtung desselben verlaufende Streifen anzuordnen, die aus einem Werkstoff bestehen, der geringe gegenseitige gleitende Reibung aufweist. Bei dieser Ausführung sind die unteren Streifen in die Grundplatte eingelassen und weisen im allgemeinen Führungsnuten für die Streifen des Schlittens auf. Es ergibt sich dabei der Nachteil, daß sich in die unvermeidlichen schmalen Längsfugen und gegebenenfalls in die Vertiefungen leicht Speisereste einsetzen, die nur schwer zu entfernen sind.

Gemäß der Erfindung wird die Gegenfläche für die Streifen des Schlittens durch eine auf der Grundplatte der Maschine angebrachte einstückige Auflage gebildet, die aus einem Werkstoff besteht, der geringe gleitende Reibung ermöglicht. Es ergibt sich dabei der Vorteil, daß die Maschine sehr leicht gereinigt werden kann und Reparaturen etwa infolge Ausbrechens der bisher verwendeten, in die Grundplatte eingelassenen Streifen nicht notwendig werden. Zweckmäßig besteht die Auflage der Grundplatte ebenso wie die Streifen aus einem harten Kunststoff mit glatter, gleitfähiger Oberfläche. Für die Auflage wird vorzugsweise «Resopal» verwendet. Um die gleitende Reibung weiter zu verringern, können die Streifen des Schlittens derart profiliert ausgebildet und befestigt sein, daß deren Gleitfläche schmäler ist als die Fläche, mit der die Streifen an der Unterseite des Schlittens anliegen.

In der Zeichnung ist die Erfindung in einem Ausführungsbeispiel dargestellt.

Fig. 1 ist eine perspektivische Ansicht der Grundplatte der Brotschneidemaschine mit dem aufgesetzten Schlitten.

Fig. 2 ist ein Schnitt nach Linie *a–b* in Fig. 1.

Fig. 3, 4 und 5 zeigen in ähnlicher Darstellung Streifen mit verschiedenartigem Querschnitt.

Die Grundplatte der Brotschneidemaschine besteht aus dem z. B. mittels einer Schraubzwinge fest auf dem Tisch zu befestigenden Teil 1 und dem hiermit klappbar verbundenen Teil 2. Beide Teile sind aus Holz gefertigt und haben eine Kunststoffauflage 3. Mit 4 ist der Schlitten bezeichnet, der ebenfalls aus Holz besteht. Die Kunststoffstreifen 5 sind in dem Schlitten an dessen Unterseite eingelassen. Wie in Fig. 1 angedeutet, können durchgehende oder mehrstückige Streifen verwendet werden. Fig. 3 bis 5 zeigen, daß die Streifen profiliert ausgebildet sein und z. B. T-förmigen Querschnitt besitzen können. Bei dieser Ausbildung und Befestigung der Streifen ist die gleitende Reibung zwischen diesen und der Auflage 3 dadurch verringert, daß die Gleitfläche schmäler ist als die Berührungsfläche des Streifens mit dem Schlitten.

Statt beide Teile der Grundplatte mit der Kunststoffauflage zu versehen, ist es auch möglich, daß diese Auflage nur auf dem die Bahn für den Schlitten bildenden Teil 1 der Grundplatte angebracht ist.

Eine weitere Ausführungsform der Erfindung besteht darin, daß die geringe Reibung aufweisende Auflage aus von einer ausreichend dicken, z. B. in mehreren Aufstrichen angebrachten harten Lackschicht oder aus einer Schicht aus einem zur Versiegelung geeigneten Material auf Kunststoffbasis besteht. Wesentlich ist, daß die Auflage eine harte, glatte, gleitfähige Oberfläche besitzt.

PATENTANSPRUCH

Brot- und Aufschnittschneidemaschine mit einem auf ihrer Grundplatte parallel zum Scheibenmesser geführten und für das Auflegen des Schneidgutes bestimmten Schlitten, an dessen Unterseite in der Bewegungsrichtung des Schlittens verlaufende Streifen befestigt sind, die aus einem Werkstoff bestehen, der geringe gleitende Reibung ermöglicht, dadurch gekennzeichnet, daß die Gegenfläche für die Streifen durch eine auf der Grundplatte der Maschine angebrachte einstückige Auflage gebildet wird, die ebenfalls aus Material mit geringer Reibung besteht.

UNTERANSPRÜCHE

1. Schneidemaschine nach Patentanspruch, dadurch gekennzeichnet, daß sowohl die Streifen als auch die Auflage der Grundplatte aus hartem Kunststoff mit glatter, gleitfähiger Oberfläche bestehen.

2. Schneidemaschine nach Patentanspruch, dadurch gekennzeichnet, daß die Auflage aus einem dicken, harten Lackaufstrich oder einer Versiegelungsschicht mit glatter, gleitfähiger Oberfläche besteht.

3. Schneidemaschine nach Patentanspruch, dadurch gekennzeichnet, daß die Streifen auf der Unterseite des Schlittens eingelassen sind.

4. Schneidemaschine nach Patentanspruch, dadurch gekennzeichnet, daß die Streifen auf der Unterseite des Schlittens durchgehend ausgebildet sind.

5. Schneidemaschine nach Patentanspruch, dadurch gekennzeichnet, daß die Streifen auf der Unterseite des Schlittens mehrstückig ausgebildet sind.

6. Schneidemaschine nach Patentanspruch, dadurch gekennzeichnet, daß die Streifen derart profiliert ausgebildet und angeordnet sind, daß ihre Gleitfläche schmäler ist als die Fläche, mit der sie an der Unterseite des Schlittens anliegen.

"Flying Chips"
p. 165
Nov-Dec 1970

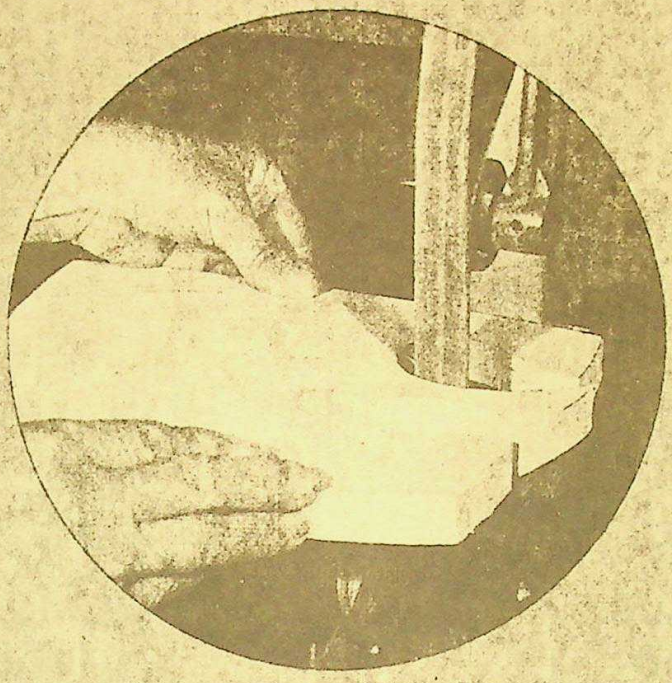
cutting board

The cutting board featured here makes a perfect last minute gift. But before you give the cutting board away, be sure to make a cardboard or hardboard template. You should be getting a lot of repeat orders for the board from friends and relatives.

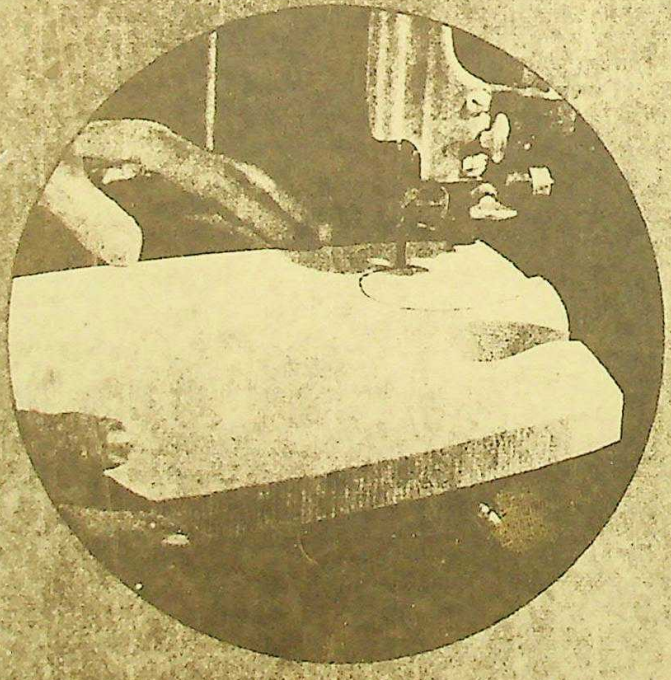
If you decide to use the cutting board as a decoration, use walnut. But a good hardwood like maple, hickory or beech is best for hard kitchen use.

Using the squares method, make your design on a piece of cardboard so it can be used again for future use. The cutting board can be cut on the scroll saw or band saw, Photo No. 1. Edges can be sanded smooth on the Rockwell Sander/Grinder, Photo No. 2.

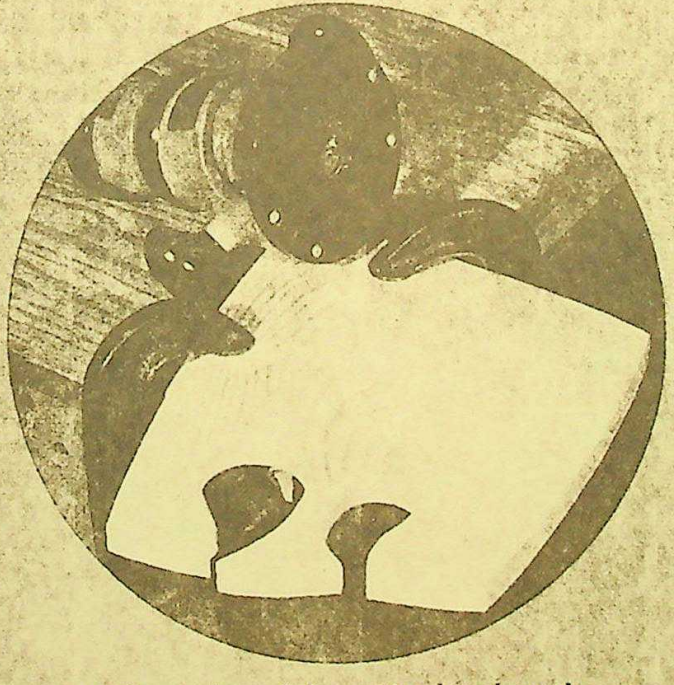
Although it is not absolutely necessary, the edges can be rounded with a corner round bit mounted in a high speed portable router, Photo No. 3. The edges can be partially rounded with garnet paper instead of using the router. Sand the working surface thoroughly, making sure to clean up all blemishes which will show up later. *Do not* use any stain or sealer, except olive oil. If the cutting board is sealed in any way, it will give off a rancid odor.



2. *Edges of the board are sanded smooth on the Rockwell Sander/Grinder fitted with a curved platen and a fine garnet belt.*



1. *After the design has been transferred to the stock, the cutting board can be cut to shape on either the scroll saw or band saw.*



3. *Sharp edges of the cutting board can be easily rounded with a portable high speed router fitted with a No. 406 Corner Round Cutter.*

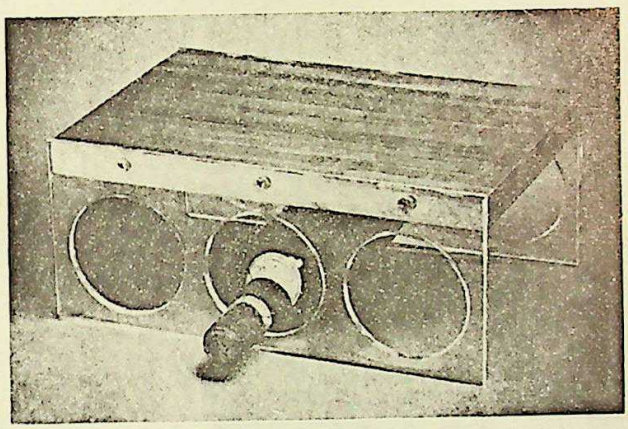
Wine Comes of Age in America

GIFT & DECORATIVE ACCESSORIES p. 84 MARCH 1973

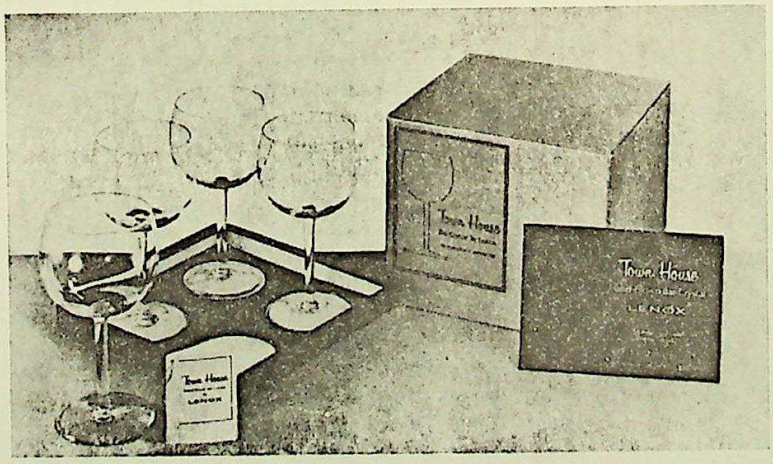
XD 7/698

Sturdy stems mate with classic bowl shape in lead crystal glasses from Austria. From $6 to $9.50 retail. Wallace Silversmiths, Wallingford, Conn. 06410.

The popularity of wine knows no bounds—it has received enormous publicity in the national media because it's become part of the American menu. Recent china and gift shows have been reflecting its popularity by presenting the largest and most imaginative array of accessories for wine: first and foremost, stemware in every shape and size; then, racks for every home decor; accessories for serving wine plus snacks; and finally, little luxury touches: tasters, wine keys.



Wine rack and cheese board combine two old favorites. Lucite stand holds three bottles beneath cutting board. $15. Rubel & Co., 225 Fifth Ave., New York 10010.



"Town House Crystal." Lead crystal bar goblets are hand-blown. 7 in. high. $22 the set of four. Lenox, Prince & Meade Sts., Trenton, N. J.

Wine coaster is silverplated copper and nickel with grape vine design. 3½ in. diameter. $3.50. Holiday Imports, 982 Folsom St., San Francisco. ►

Lefthandedness

—some new right-thinking designs

By SUE NIRENBERG ☐ In this land of unliberated minorities struggling for recognition, another one cries out: the 10% of the American population who are left-handed! If you are in the right-handed majority, doubtless you're unaware of the irksomeness of life for the lefty.

Although some left-handed people can train themselves to use right-handed things in a right-handed way, those who cannot are living counterclockwise in a clockwise world. Alice Through the Looking Glass. Topsy turvy. Upside down. Inside out. Utter confusion.

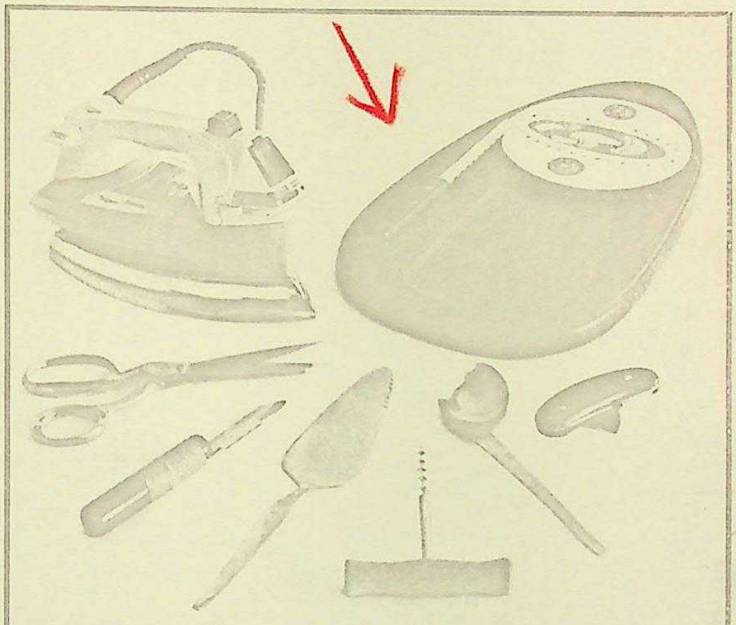
Everyone and everything, it seems, is happily revolving clockwise (from left to right) —clocks, doorknobs, books, screws, jar tops, can openers, corkscrews. An endlessly hostile environment surrounds a lefty.

Left-handed violinists, guitarists and banjoists must restring their instruments. Gum chewers face a gum wrapper geared for the right-handed gum chewer; apple-corers, too, and cameras. A more complicated tool such as a power saw can be more than irksome—it can be menacing, or even dangerous. To use it, a left-hander must cross his arms, and since he can't see where he's going through his crossed arms, there's definitely a risk of cutting off a finger or two or three.

Handedness is so obviously important in the kitchen. Sink units are normally placed so that the draining board is on the left. In washing dishes, the dominant hand is usually the active one, with the lesser hand placing the crockery or cutlery on the board. For the lefty, another case of cumbersome arm crossing. (The left-hander often feels that he is going through life as a pretzel.)

Pity the presser. With irons, the flex is usually attached to the right-hand side of the iron, and the cord is not free of the ironing board. Consider handles. The standard position for the handle on a refrigerator door is on the left. Why? We do not know, but at least it is not as necessary to be careful in opening a refrigerator as it is in operating a power saw. Still, for the lefty, that means opening and closing the door with the lesser hand and removing items with the dominant one.

Something as simple as a frying pan becomes a nuisance if there's only one pouring lip. Scissors are ordinarily a calam-



They don't look that different at first glance, but look again (clockwise from top right): a left-handed cheese board with knife placed on the magnetized left side, $7; Danish can opener, $2.75; a long-handled stainless steel soup spoon, $4; a counterclockwise corkscrew made exclusively for The Left Hand, $2; pie server with the serrated edge on the left side of the blade, $7; wooden-handled potato peeler with a stainless steel blade that cuts toward the lefty, $2; Wiss industrial shears with proper cutting edge and also a left-handed thumb grip, $13; iron where the cord snaps on to either the left or right side, $15. All items shown are from The Left Hand, 145 East 27th St., New York 10016.

HERE'S SOMETHING NEW FOR THE PARTY-LOVING KITCHEN

The well-deserved smile on Designer [illegible] sweeping as the array of cookware, plastics, woodenwares and cutlery spread around him. For the past six years he has worked on this collection, the first phase of Dansk Gourmet, a just introduced division of Dansk Designs. Cyren, who is an award-winning designer from Gävle, Sweden, worked at a silversmith and goldsmith before serving as the chief glass designer at Orrefors for more than a decade. He now works exclusively for Dansk—and has definite ideas about how tools and utensils for the kitchen should look. "I want everything in this collection to look as if it were derived from generations of use—a non-design approach. These things should have the character of well-used tools," says Cyren, who researched the concept with Dansk's president, Ted Nierenberg, by touring European restaurants and utensil shops and talking with chefs about their preferences. Although based on tradition, there is nothing traditional about the cast-aluminum (with weighted bottoms) saucepans, skillets, casseroles, stockpots, Dutch ovens, tea kettles, baking dishes and—something new—an oval pan for heating frozen foods. A master of materials, Cyren's plastic pitchers, bowls and canisters are succinct statements of form and color, while the 14 varieties of wooden boards in maple or sycamore can hang decoratively when not in use. Decidedly classic is the cutlery, yet it, too, has a distinct twist with red, yellow or black handles. This is the beginning of the collection. Cyren plans to add glass storage containers and molds; cast-iron cookware and a range of tools and utensils from strainers to spatulas for both conventional and microwave cookery. Nierenberg foresees, "People living in smaller homes with the kitchen at the core as the major living space. Cooking will be a family activity shared by husband, wife and children. Rather than being hidden behind cabinet doors, kitchenware will be exposed as decorative objects." He and his designer see the collection as a one-source answer—a complete line of kitchenware both functional and decorative. The fundamental idea is that the kitchen should be a place to live in and enjoy as well as a workroom. "Who can afford to eat out anymore?" queries Nierenberg, citing the cost of a recent French meal.

DEBRON AN EXCEPTIONAL NON-STICK COATING.

D7/698

DEBRON AN EXCEPTIONAL NON-STICK COATING.

DEBRON, the new high performance non-stick coating for cookware/bakeware/electrics, costs less than the old high-priced coating and economical application means savings in manufacturing.

DEBRON IS ALREADY ACCEPTED BY THE FDA, under the regulation 121.2621—no worries for 1975. DEBRON is recognized under the Component Program of Underwriters' Laboratories Inc.

DEBRON HAS A LONG RECORD of proven success in the U. S., Canada and abroad.

DEBRON IS ECONOMICAL, applied without primer or frit in a single coat, and grit blasting is not necessary.

DEBRON IS NOW ON PRE-COATED COILS, the most efficient way to apply any coating to metal. DEBRON coated aluminum takes the deepest draws, does not crack or peel.

DEBRON IS THE IDEAL NON-STICK SURFACE, hard, slippery, shiny, with excellent release properties and available in a variety of colors.

DEBRON IS MADE BY DE BEERS, a specialist in top performance chemical coatings. Contact your manufacturer, factory representative or de Beers Laboratories for full information and samples.

JULY, 1976

A wide range from Wuidart

p. 26 TABLEWARE INTERNATIONAL

New shapes in Portuguese pine wood from SOT of Portugal, porcelain from Bing and Grondahl of Denmark, and glassware from Orrefors of Sweden, CALP of Italy and Waterford of Ireland, will be featured strongly on the Wuidart International stand at Harrogate this month.

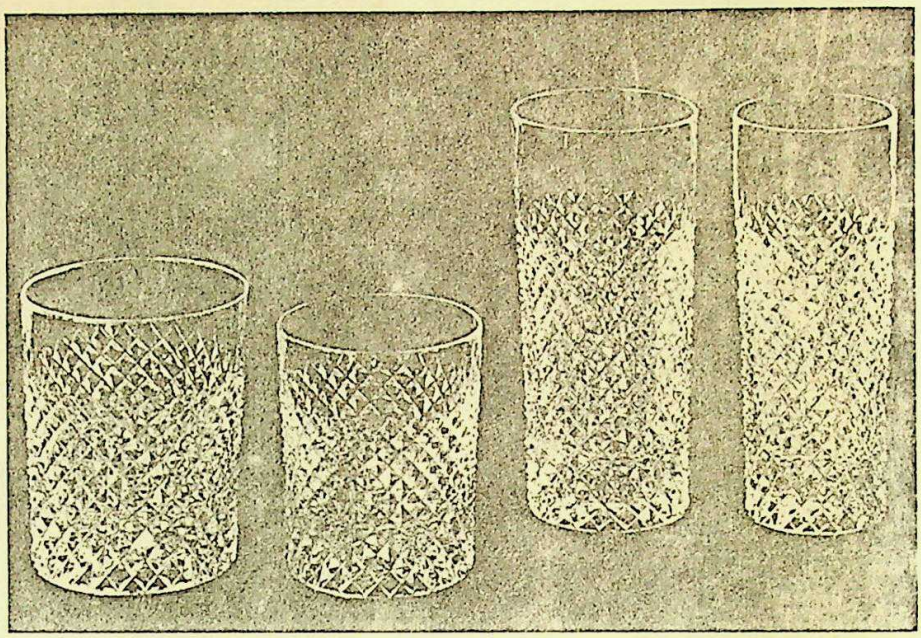
The range of ware in Portuguese pine wood includes an attractive cheese board with a set-in tile and its own cheese knife and rest, chopping boards and a circular bread board with rope handle. SOT, a small company based in Pernes, Portugal, produces a wide and varied range of dining and kitchen accessories all of which are made in wood.

Royal Crystal Rock is a range of striking tumblers — in three different patterns — from CALP of Italy. They are machine-made in lead crystal.

Glassware from Orrefors will include a range of tumblers suitable for all occasions and for all types of drink (they have separate clip-on handles which allow them to be used for hot drinks) and a selection of decanters, vases, candleholders and ashtrays.

Bing and Grondahl's collections will range from the company's beautiful Seagull dinner service (in pale plue and white underglazed porcelain) to Tema – a new and modern dinner service in oven-to-tableware which comes in an attractive earthy-brown with darker brown striping — and Henning Koppel White, a pristine white dinner suite in underglazed porcelain.

Other companies represented by Wuidart International will be Miderамica of Coimbra, Portugal (colourful ceramic plant pots and urns) and Reijymyre of Sweden (small crystal animals).



Royal Crystal Rock from CALP of Italy. Shown here, four sizes of tumbler in one of the three patterns available

of interest to note that on the 23rd of April 1775 after the battle of Lexington and Concord) Tobey making cartridge boxes for men of the Dartmouth a grand total of 41 at 1s each. Although he made a ety of other items, the above list represents his main —repeated year after year. As with all cabinetmakers, did a great deal of repair work.

we have a good idea of the original price of standard de by the urban cabinetmaker, but what about the uestion—the relationship to today's prices?

l sad to say, it is very difficult to relate accurately the n item made in 1776 to today's costs. The variables e the amount of apprentice labor (at little or no cost), h of the workday (12 hours against 8 hours today), s and the cost of materials. Today the employer must share of workman's compensation, insurance, Social , retirement benefits, heat and power costs, machin- stment, upkeep and depreciation, few of which had its in 1776. Perhaps a research economist could come

er, what's wrong with having a little fun by applying easonable conversion factor? Records indicate that the modern counterpart earns $80.00 a day, or 80 times more than in 1776. We will make a further assumption that the same factor will apply to prices. Therefore, the 1776 cost multiplied by 80 should put us somewhere in the ballpark. Let's try this theory out.

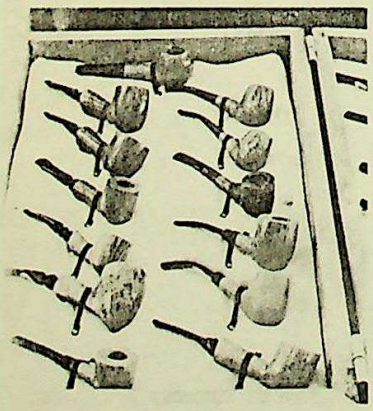
Tobey made maple desks for 3L or $10. Multiplying by 80 yields $800, not too far off. Tobey got 2L or $6.67 for a lowboy. 80 x $6.67 = $534. A little low perhaps, but still within reason. This approach seems to work reasonably well for the larger items, but not so well for smaller things such as pipe boxes, which he sold for 2s. According to our theory, today's cost would be $26.64. But one made in our cabinet shop just sold for $100, about 300 times Tobey's figure.

Tobey's books also contain the prices he paid for lumber, and we can compare them to today's costs. At first glance they are startlingly low: 190 board feet of maple cost him 5s 8d or $0.94. That's about a half-cent per board foot. He paid 14s or $2.33 for 42 board feet of walnut (about five cents per board foot) and 12s or $2 for 265 board feet of pine (about seven-tenths of a cent per board foot). For 114 board feet of mahogany, he paid 7s or $1.17 (about one cent per board foot). How would you like to buy lumber at those prices?

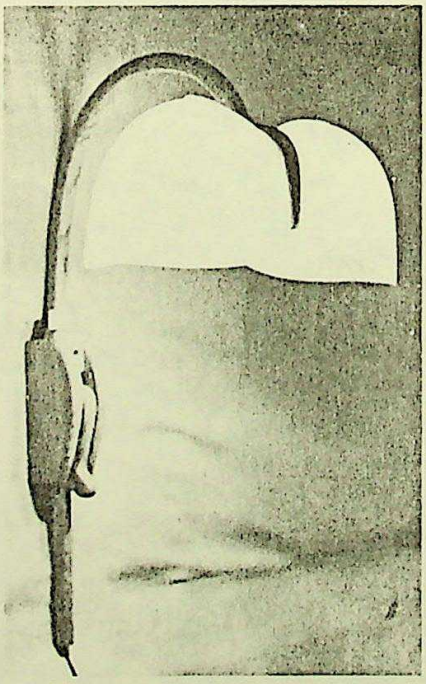
Of course if we apply the same factor of 80, maple would cost about $0.40 a board foot, the walnut about $4, the pine $0.56 and the mahogany $0.80. Except for the walnut, today's prices would be at least twice as high. Walnut in those days was scarce in Massachusetts. (It still is, especially around Dartmouth and Fall River.) Scarcity could have driven the price as high as it was, even by Tobey's standards, and the boards may have been of exceptional quality or size.

Well, despite all our conjectures and weak computations of comparative costs, it remains a most rewarding experience to examine old account books and see historic cabinetmaking come alive.

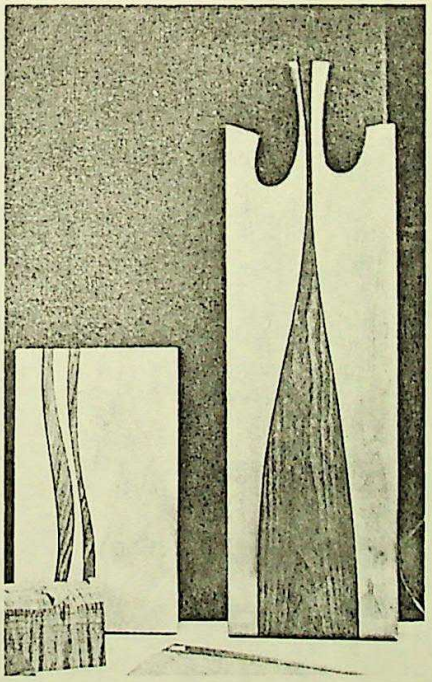
lly, smaller items sold better at ie and larger, more expensive at retail. Some craftsmen sold d a few sold nothing. All com- d about the size of the wholesale- rice split, and of the difficulty of g a fair return for an hour's work.



pes by Ed Shank were $25-$60. His s earned from fairs and shows.



Peter Danko's wall lamp was $180. Although interest was high, sales were low.



Wayne Rabb sold many cutting boards at $10-$25, and also some furniture.

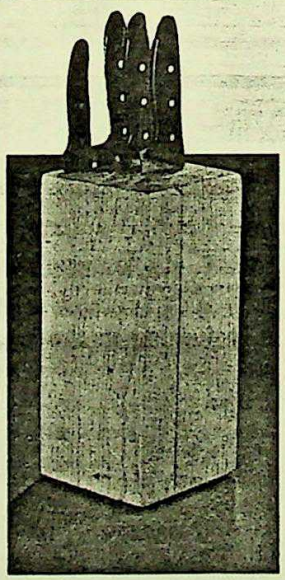
B. See-through Counter Saver

A. Handbag opens to Full Size Shopping Cart: Carry this to the store like a handbag — folded it's only 10x16", fits in the supermarket cart. Snaps open to a full size cart to wheel home the groceries. Sturdy chrome plated steel frame has big rubber wheels, waterproof heavy vinyl covered compartment. Stores in closet or car trunk.
1336—Y Shopping Cart $24.95

B. See-Through Board Covers Counter Tops: It's clear acrylic and hardly visible in your kitchen. Use it to chop and slice and roll dough and put hot pots — your Formica stays shiny, and the board just rinses off in the sink. 18" back to front, in two widths.
2410—Y 24" Countertop $14.95
2429—Y 16" Countertop $12.95

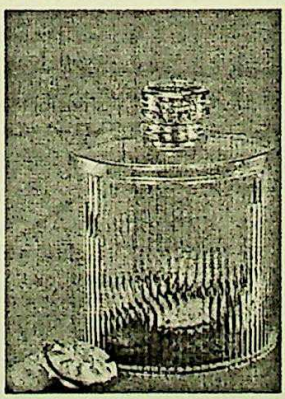
C. Butcher Block Knife Rack: Our great 10x5x4½" chunk of natural wood holds everything from little paring knives to long carvers to sharpening steel in 9 slots. Keeps them razor edged and at the ready, also frees the drawer of dangerous blades. A sharp countertop accessory!
1392—Y Knife Block $9.95



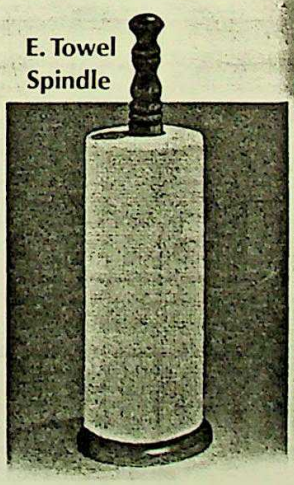
C. Knife Block

D. Snap-Crackle-Pop Jar: Put soggy cookies, nuts, potato chips or pretzels in this, and they'll get so snapping crisp they'll bite you back! Absorbent crystals in the lid work indefinitely, since you reactivate them in oven. 7" clear styrene jar stores a big boxful.
523—Y Crisper $6.50; Two for $13

E. Portable Paper Towels: A spindle keeps towels ripping ready on kitchen or bathroom countertop — pick it up and bring it to the spill. Ponderosa pine, 17", with a warm, hand rubbed finish. **1397—Y Towel Spindle $5.95**



D. Crisper Jar



E. Towel Spindle

porous. It absorbs and evaporates moisture, keeping butter cool but spreadable all day.

IT FITS: Just the right size for any refrigerator door.

AND IT'S SOOOO CUTE . . . New glazed base won't stain. Looks great in any table setting.

and Massimo Martini, president and general secreary of MACEF, respectively, the positive balance between Italian exports and imports more than doubled between 1975 and 1978 due to production expansion and inflationary prices.

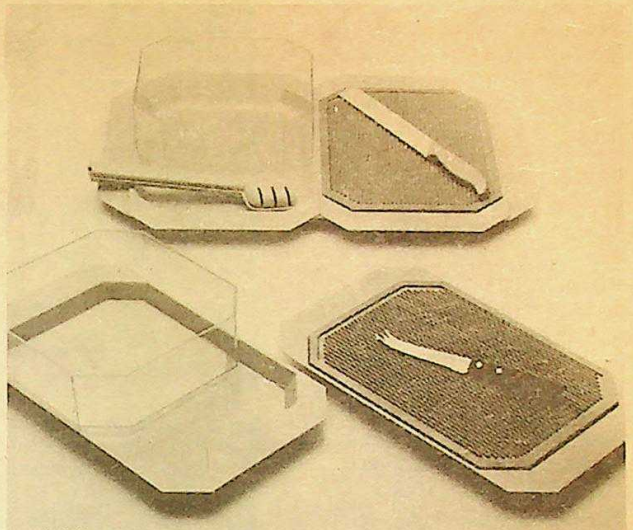
Exports to the U.S. have been uneven, however, with giftware and decorative accessories selling better than tableware.

The MACEF spring show has been scheduled for Feb. 15-18 here.

West Bend's Miller Becomes a VP

WEST BEND, Wis. — Gregory H. Miller has been promoted to vice president of product development for the West Bend Co. here.

Previously manager of product development, Miller joined West Bend as a development engineer in 1968.

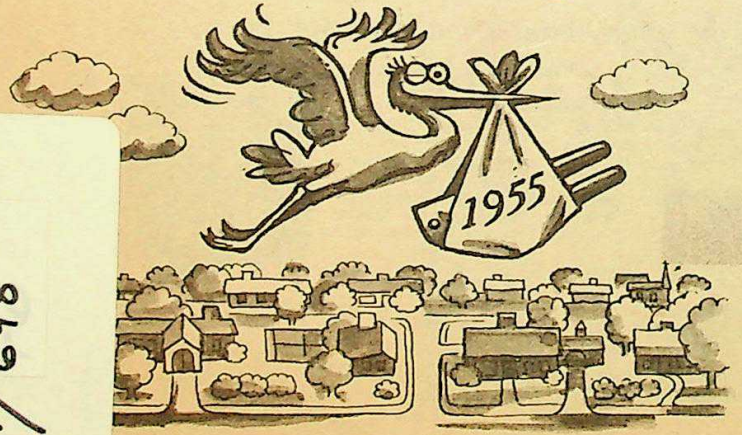


Cutting Boards, and Combination Salad Bowl — Cutting Board By I. P. I.

HFD - Retailing Home Furnishings; Sept. 24, 1979 Section One p. 24

D7/698

Selling the number one can opener is as easy as using it.



A success from the start.

In 1955, we introduced the Swing-A-Way #407 Portable Can Opener to America because we realized it was not always convenient or practical to attach one of our popular wall openers.

There were other hand-held can openers on the market, of course, but we envisioned one that was not flimsy and hard to use. What we wanted was a can opener that was as substantial, durable, and efficient as our wall models.

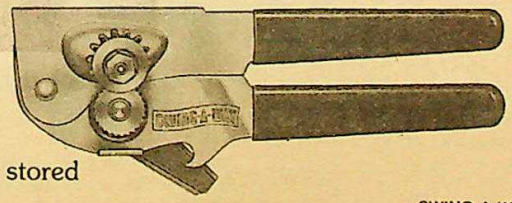
It is no coincidence that the result was the heavy-duty, easy-to-use, gear-driven Swing-A-Way Portable. And it stored in a drawer, out of the way.

In the process we created a classic—a truly sensible can opener.

Today, the Swing-A-Way #407 has become the largest selling can opener of its kind in the world.

SWING-A-WAY

People everywhere tell us its the best.



SWING-A-WAY ST. LOUIS 63116

Milan Show Highlights Italian Glass Appeal in US

MILAN (FNS) — Italian glassware producers are enjoying increased business with the United States, while exporters of plastics and ceramics are having rough going because of hikes in oil prices and the weakness of the dollar.

This was the picture that emerged at MACEF housewares and decorative accessories show just concluded here. Attendance and number of exhibitors reached new highs, although American contingents were on the scanty side because of the show's timing. Merchandise ordered here, it was pointed out, would not be delivered in tine for Christmas.

The 2,295 exhibitors included 1,941 Italian and 354 foreign firms from 33 countries. Foreign visitor were close to 12,000.

CARLO GIAMPICCOLO, area manager for Bormioli, Parma glassware producer, said establishment of an American subsidiary in New York allowed an "almost vertical takeoff" of shipments to U.S. markets in little more than a year.

"We shipped glassware valued at about $800,000 during the first six months in 1978, when we opened our New York office. Since then shipments have been rising fast. We expect to close this year with $4 million worth of shipments to the United States and we have hopes of going beyond $5 million in 1980.

"The 'made in Italy' tag has been a sales booster. Besides we have been studying glass sizes and packages especially for the U.S. market," he said.

Issa Batarse, American agent for Fidenza, reported the July Chicago housewares shows excellent for his company's merchandise from jars to fine glassware, beer and iced tea glasses and mugs. Batarse said engraved glassware is more popular in Europe but is coming up in the U.S.

He cited as hot in U.S. stores clear glassware with heavy, almost scalloped bottoms at $8 a dozen.

Suppliers of ceramic and plastic goods were not as enthusiastic about the American market.

ERNESTINE, CERAMIC and decorative accessory producer in Salerno, for instance, said exports to the U.S. have only been keeping up with Italy's inflationary prices.

Shipments to West Germany, Switzerland, Spain and Japan, on the other hand, have increased in both quantity and value. Ernestine's American agent is Carl Piccoli, New York.

Caramiche Partenopee-Gestioni Industriali, Naples, reported ceramic cookware shipments to large U.S. stores and importers have slowed because of the dollar weakness. Prices have also risen 10 to 15 per cent because of hikes in cardboard packaging, labor and energy costs.

Plastic housewares and tableware face a troubled future here because of price increases due to the crude oil price upsurge this year, said Giovanni Cassinera, principal of IFI. (Industrie Plastiche Italiane), Milan.

CASSINERA SAID prices don't allow for any further distribution in the U.S. through exclusive importers. "I will go to the Chicago housewares show to find customers I can serve direct from here. As things go now, I have to update the price list every two months. At present the best business comes from Israel and the Arab countries," he noted.

With housewares and tableware hurt in recent years by Italy's decline in house-building and marriages along with steady production cost increases, exports have become the safety valve of the industry during the 1970s. According to Rudolfo Tambroni

POPULAR PRODUCTS at MACEF included stainless steel pans and serving utensils from Calderoni, Casale Corte Cerro, Italy (above), and plastic salad bowls, cutting boards, and combination salad bowl-cutting board by I.P.I., Milan (below).

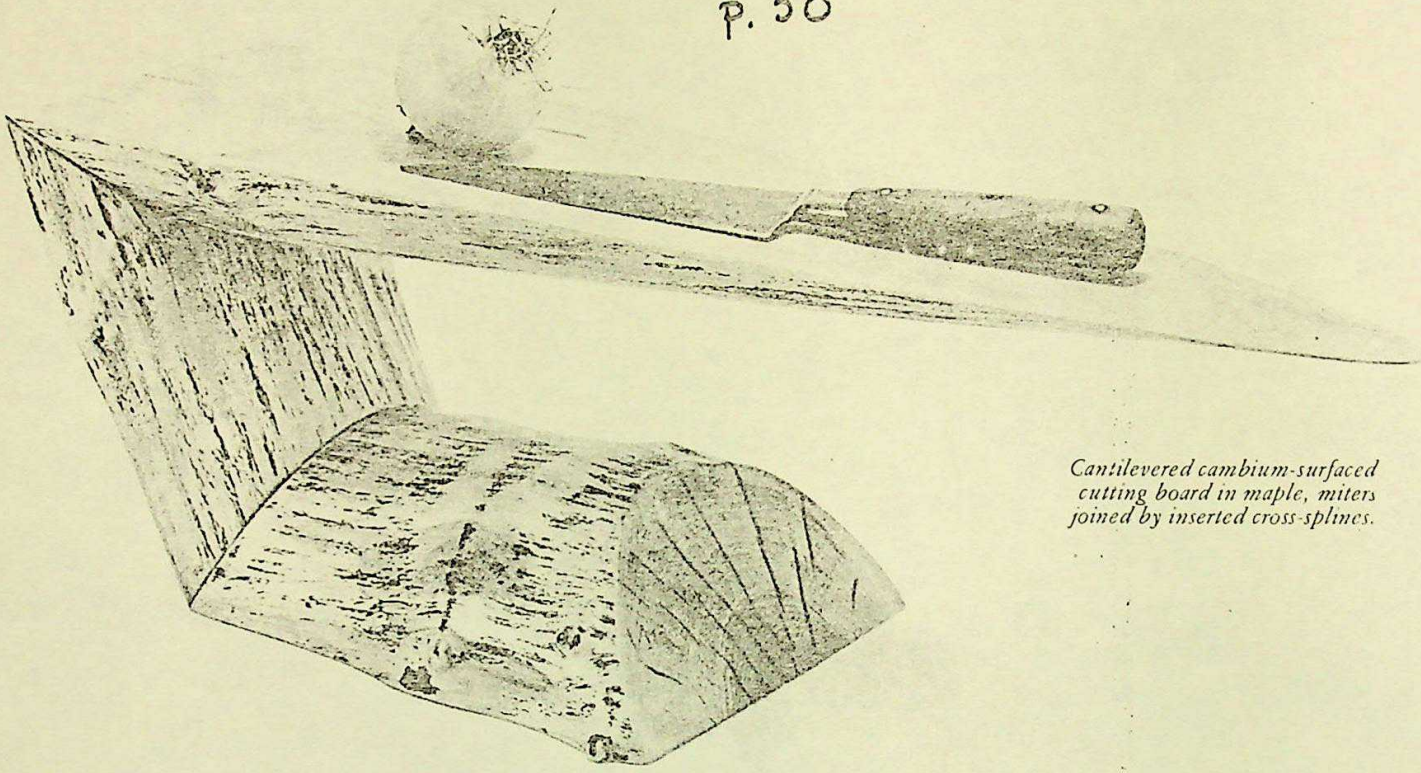
Fine Wood Working November/December 1981

D7/698
P. 50



Cantilevered cambium-surfaced cutting board in maple, miters joined by inserted cross-splines.

The McKinley Connection

A craftsman wrestles the demons of industrial design

by Stephen Hogbin and John Kelsey

Most people, given the will and some tools, can learn how to work wood. Much more difficult is figuring out what to make, how the thing shall function and appear—that is, how to design.

Some craftsmen argue that this is not a problem, on the grounds that since we cannot hope to improve the 18th-

colleges, it means studying industrial design. The trouble with that is that industrial design by definition is for mass production. Thus it must search for easily reproducible models that can tumble off an assembly line with minimum human intervention, and so it often amounts to making and meeting interminable lists of requirements, in order to tailor the skills of

Wine & Cheese, Please

This one gallon jar functions as both a wine dispenser and cheese cutting board/server. The bottom portion holds a half gallon of wine while the top half is ample enough to accommodate large cheese wedges.

Solid wood with a blond finish serves as the cutting board and lid, giving the unit an elegant look. A bright white built-in spigot releases just the right amount of wine per glass.

Werling's Wine and Cheese jar is etched or can be silk-screened with attractive lettering and graphics. This same unit also is available with the words "Vino and Cheese" or "Cookies and Milk".

Have a wine and cheese party, today!

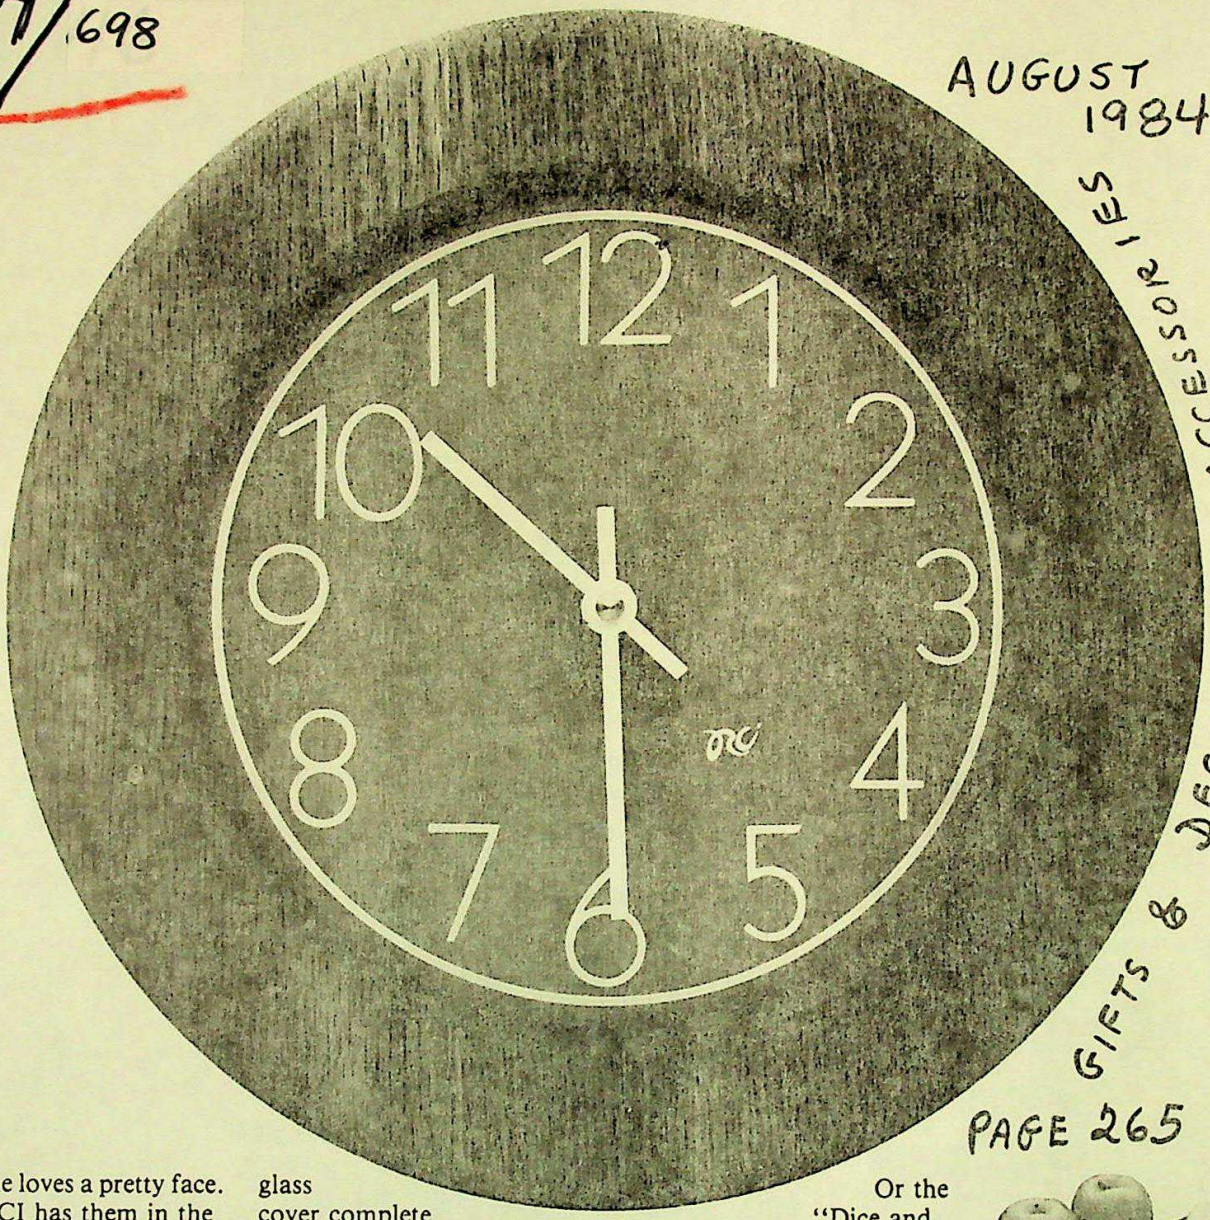
GIFTS & DECORATIVE ACCESSORIES



PAGE 265

Everyone loves a pretty face. And ORCI has them in the colors your customers want.

Platinum, peach, lavender, blue, rose, lime green, toast and white.

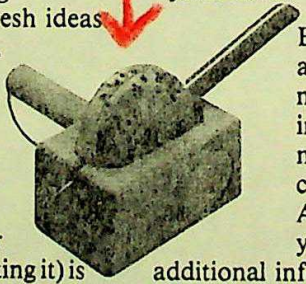
Our newest line of decorative wall clocks have hands that turn-heads wherever they turn up.

The Celebrity (round) and Meridian are good examples. Oak frames (some Celebrities available in light or dark) provide long-lasting beauty that's more than skin deep. Quartz accuracy and a real glass cover complete the attractive package.

Customers (and retailers) love our prices too—both clocks are designed to sell for *under* $35.

Only the Beginning

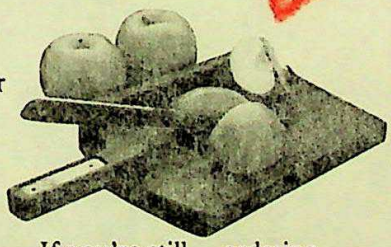
ORCI has other fresh ideas for your store too.



Like our imaginative bagel cutter. Now it's easy to obtain perfect-for toasting slices in seconds. The clever design (we're patenting it) is a sure conversation starter and profit maker for your store.

Or the "Dice and Pour" Cutting Board, another ORCI original-design product. Its contemporary look attracts attention. Practical features, like the built-in handle and twin-grooved "juice catch" close the sale.

Both these items and dozens more are included in our new, color catalog, the ACORN. For your copy or additional information on the products you see here, call our toll-free number.



If you're still ordering from the same old faces, change your pace. Order from ORCI. It could change the whole complexion of your business.

(54) Food chopping boards

(57) A food chopping board is provided with one portion 3 defining a planar surface on which food can be prepared, whilst an adjacent portion is formed as a downwardly extending bowl 2 provided with a perforated base 7. The underneath surface of the planar portion 1 is formed with support ridges 8 & 9 so that it can be laid on an existing worktop surface. Grooves 4 in the surface 3 provide for the run off of liquids into the bowl 2. Rim portions 5 define an outlet gap 6 for directing the sweeping of prepared foodstuffs into a container. The bowl 2 may project into a sink, or the chopping board may be mounted on a support bowl (not shown) divided into two sections by an inner wall, one section having a perforated base.

Improvements relating to Food Chopping Boards

This invention aims to provide a food chopping board of a design which is particularly useful in the kitchen for the purpose of processing foods. Various food materials which are being processed may require an initial removal of unwanted portions (peeling, etc.) prior to being chopped into a state suitable for cooking or display.

According to this invention there is provided a food chopping board comprising a generally planar portion leading into a bowl portion which extends downwardly substantially at right angles to the planar portion, the planar portion having a generally flattened upper face whose edge partly defines the opening of the bowl portion and a lower face which may be laid on an existing flat surface so that the upper face will lie parallel to that flat surface.

This form of chopping board can readily be supported on an existing kitchen worktop with the bowl portion projecting to one side of the work top or, for example, into a kitchen sink. Any unwanted material removed from foodstuffs being prepared on the chopping board can be swept into the bowl portion whilst the finally prepared and chopped material can be swept off the

other side of the board into a cooking utensil, preparation dish, or the like. Preferably part of the edge of the upper surface of the planar portion leading from the opening of the bowl will have an upstanding rim which does not extend over a portion of the edge generally opposite to the region where the bowl portion is defined. The gap in the rim will provide a region where the prepared food may be swept off into a container whilst the upstanding rim portions will provide a lead-in to that gap.

In the preferred arrangement the lower face of the planar portion defines a downwardly projecting support ridge which will support the board on an existing surface. Ideally, this support ridge will incorporate a natural or synthetic rubber or other material providing for a friction grip of the board on an existing flat surface, which will prevent the board from sliding over the existing flat surface. The support ridge is preferably defined to lie parallel to the edge of the planar portion.

The bowl portion of the board will ideally be provided with a perforated base so that liquids will drain off and so that raw materials can be washed and drained at the same time within the bowl portion.

Advantageously the bowl portion and the planar portion will, between them, define a circular or

rectilinear body in plan view, and the bowl portion can then be of generally oval or rectangular cross-section.

The invention further extends to a chopping board as hereinbefore defined in combination with a support bowl onto which the board can be mounted, with the bowl portion of the board within the support bowl.

This support bowl can provide a means of storage of materials to be processed and/or a receiver for waste material or washing water. Preferably the support bowl will be divided by an inner wall into two separate portions, one only of which has a perforated base. Ideally, the top edge of the inner wall will have a notch therein allowing water to flow between the two portions of the support bowl, so that if the portion without the perforated base comes over-full with liquid, this will spill over into the perforated section for drainage into a sink or the like.

The invention may be performed in various ways and a preferred embodiment thereof will now be described with reference to the accompanying drawings, in which:-

Figures 1 and 2 are plan and underneath views of a chopping board constructed in accordance with this invention;

Figure 3 is a vertical cross-section through the board shown in Figures 1 and 2;

Figures 4 and 5 are plan and underneath views of a

support bowl to be used with the chopping board of Figures 1 to 3; and

Figure 6 illustrates the chopping board and support bowl as a combination.

The chopping board illustrated in Figures 1 to 3 is forme. from a planar portion 1 and a bowl portion 2. The planar portion 1 has a generally flat top surface 3 but with an outer groove 4 which will allow run-off of liquids into the bowl portion 2. Rim portions 5 define an outlet gap 6 whereby chopped foodstuffs may be swept off into a saucepan or other container. The bowl portion 2 is provided with a perforated base 7 for the run-off of liquids or to enable foodstuffs to be washed and drained prior to further processing. The underneath of the planar portion 1 is formed with a pair of curved support ridges 8 and 9, the outermost one incorporating a strip of rubber or synthetic material which will reduce the tendency for the chopping board to slip when placed on an existing flat surface.

The chopping board can be used in one of two ways. Firstly, it can, for example, be positioned on an existing worktop, preferably with the bowl portion 2, projecting down into a sink, and foodstuffs can then be prepared on the flat surface 3 of the planar portion 1. Alternatively, the bowl portion 2 of the chopping board may be nested within the larger section 11 of a two-

section support bowl 12, as illustrated in Figures 4 and 5. The smaller section 13 of the support bowl 12 has a perforated base 14 and the dividing wall 15 between the two sections has a notch 16 to allow liquids within the section 11 to run off into the section 13. When the chopping board and support bowl are used in combination, as illustrated in Figure 6, the main section 11 of the support bowl 12 can provide storage for materials to be processed on the top surface 3 of the chopping board and any juices or other liquids which might run off into the perforated bowl portion 2 will be received within the closed section 11 of the support bowl 12. This enables the chopping board to be used at places remote from an existing work surface and kitchen sink.

Whilst the chopping board and the support bowl have been illustrated in circular form, it will be appreciated that these items could be of other cross-sectional shapes, particularly rectangular.

CLAIMS

1. A food chopping board comprising a generally pla ar portion leading into a bowl portion which extends downwardly substantially at right angles to the planar portion, the planar portion having a generally flattened upper face whose edge partly defines the opening of the bowl portion and a lower face which may be laid on an existing flat surface so that the upper face will lie parallel to that flat surface.

2. A board according to claim 1, wherein part of the edge of the upper surface leading from the opening of the bowl has an upstanding rim which does not extend over a portion of the edge generally opposite to the region where the bowl portion is defined.

3. A board according to claim 1 or claim 2, wherein the lower face of the planar portion defines a downwardly projecting support ridge which will support the board on an existing surface, with the support ridge preferably being defined to lie parallel to the edge of the planar portion.

4. A board according to claim 3, wherein the support ridge incorporates a natural or synthetic

rubber or other material providing for a friction grip of the board on an existing flat surface.

5. A board according to any one of claims 1 to 4, wherein the bowl portion has a perforated base.

6. A board according to any one of claims 1 to 5, wherein the bowl portion and the planar portion between them define a circular or rectilinear body in plan view.

7. A board according to any one of claims 1 to 6, wherein the bowl portion is of generally oval or rectangular cross-section.

8. A chopping board according to any one of claims 1 to 7, in combination with a support bowl onto which the board can be mounted, with the bowl portion of the board within the support bowl.

9. A combination according to claim 8, wherein the support bowl is divided by an inner wall into two separate portions, one only of which has a perforated base.

10. A combination according to claim 9, wherein the top edge of the inner wall has a notch therein allowing water to flow between the two portions of the support bowl.

1. Assam Tea Maker
How strong do you like your tea? Developed upon request of the British Tea Council, this ingenious design allows you to steep tea to any strength, then completely stop the process with the plunger. When serving, replace strainer apparatus with glass lid. Made in Switzerland of borosilicate glass. Plastic strainer with metal plunger and strainer cover. Dishwasher-safe. 6"h. 32-oz. capacity. **5586.** $32.00.

2. Tabletop Grater
An efficient tool for grating cheese, chocolate, nuts. Compact and sturdy, with stainless-steel body and drum. Simply insert food in hopper, squeeze grater, and turn top knob. Closes for storage. Comes apart for easy cleaning. Dishwasher-safe. Made in Italy. Holds 3½ oz. block of cheese. 4¼". **72052.** $25.00.

3. Minitimer
Just twist the top to set the 60-minute timer. Numbers are easy to see from top or side. Designed by Richard Sapper. Represented in the Museum Design Collection. Made in Italy. 2¼" diam. **71910.** $16.00.

4. Bottle Openers
Is it a flying saucer? No, it's a great little gadget that fits right into your palm to uncap beverage bottles. Heavy, durable stainless steel shimmers through the bright plastic covering to create an iridescent surface. 3" diam. **5710.** Green. **5709.** Blue. $12.50 each.

5. Poultry Shears Ⓜ
Simple, beautifully shaped shears do their task efficiently and gracefully in the kitchen or at the table, then come apart for thorough cleaning. Their ergonomically shaped handles provide comfortable gripping, and they spring open after each squeeze for easy operation. Designed by Sanelli. Made in Italy of stainless steel. 9½". **5739.** $70.00.

6. Teorema Tray
Crafted from one piece of stainless steel, this streamlined serving tray will always be in style, and is a practical size for multiple uses. Designed by Pino Tovaglia for Alessi, and made in Italy. Handwash. 14¼" diam. **71759.** $85.00.

7. Cutting Board and Knife
Bread cutting is easier now. The polystyrene board holds bread securely in place. Regulate thickness with the guide, line up the loaf, set a knife into the frame, and slice. Universal design by M. Benktzon and S. E. Juhlin. Represented in the Museum Design Collection. Stainless-steel knife has an angled handle and the proper balance to aid gripping and augment the user's available strength. Durable plastic handle and serrated blade. Both, made in Finland and dishwasher-safe. **3340.** Board. 13 x 4¼". $32.00.
3342. Knife. 13". $22.00.
72079. Board and Knife Set. $48.00.

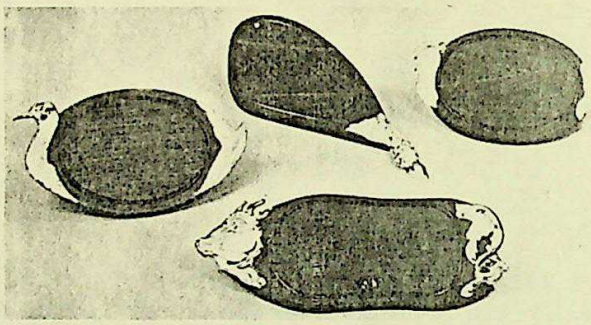
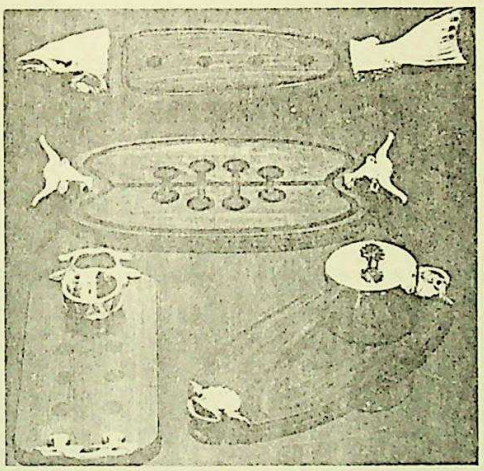
Metal and Wood: Elegant Statements in Serving

Metal makes a shining contrast to the warmth of wood on the latest serving frontier. As emphasis turns to more home entertaining, the selection of merchandise pictured here is making a strong retail comeback as a stately way to make serving a very special occasion.

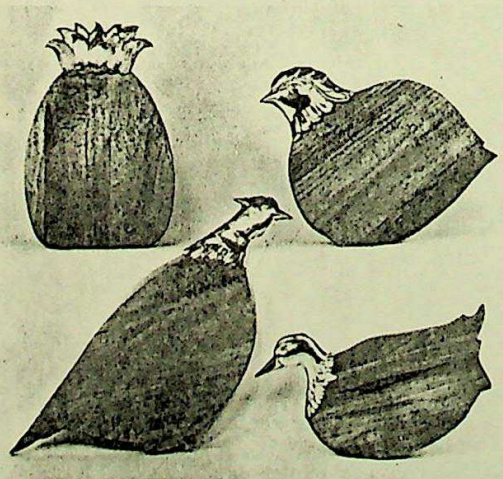


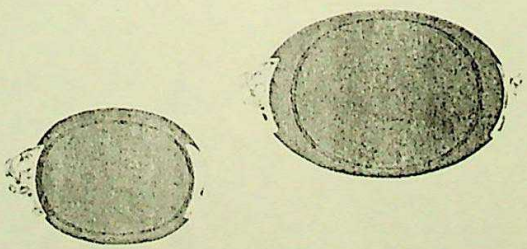
Serving and cutting boards are handcrafted in richly grained teak and rosewood inlays. From $50 to $90. Grainware, 2600 N. Pulaski Rd., Chicago 60639.



Publicitaires serving pieces in solid mahogany have nickel-plated trim. From $60. Jacques Jugeat, 225 Fifth Ave., New York 10010.

Cast brass and oiled hardwood cutting and serving boards are available in a variety of designs created by Gene Balzarini. From $20. Rubel & Co., 225 Fifth Ave., New York 10010.





Wooden serving and cutting boards have white metal trim and hardwood bases. From $4 to $20. Crossfirance, 225 Fifth Ave., New York 10010.

Country French Charm

By Robert E. Dittmer and Karol Brookhouser

Creating a personal decorating style that reflects your tastes and way of living is easier than ever today. Full-line retail stores and mail-order catalogs not only offer coordinated furniture, fabrics, wallpapers, and accessories, but they also provide good ideas about how to combine furnishings for a look that's uniquely your own. This sun-filled bedroom scheme, for instance, was created with furnishings from an Ethan Allen Gallery.

At the heart of this country-fresh scheme are a handsome armoire and a caned headboard with romantic French styling. Their warm, rustic finish is accentuated with gracefully carved scrolls and scallops.

To heighten the cozy atmosphere created by the provincial-style pieces, a blue documentary print covers the love seat and a plump duvet. Deep plum is pulled from the fabric and repeated on the ceiling beams, setting off the coordinated wallpaper in the bed niche. The floor, enameled a shiny, lemon yellow, wraps the room in an unexpected glow.

Finishing touches, like the kidney-shaped side table and the caned-back fauteuil chair, imbue the scheme with timeless elegance. Other accents, like the dhurrie rug, the porcelain bird figurine, and the carved wooden goose look as if they've been collected over the years, but they, too, are all from the same store.
